

GDAS

Geochemical Database Administration Service

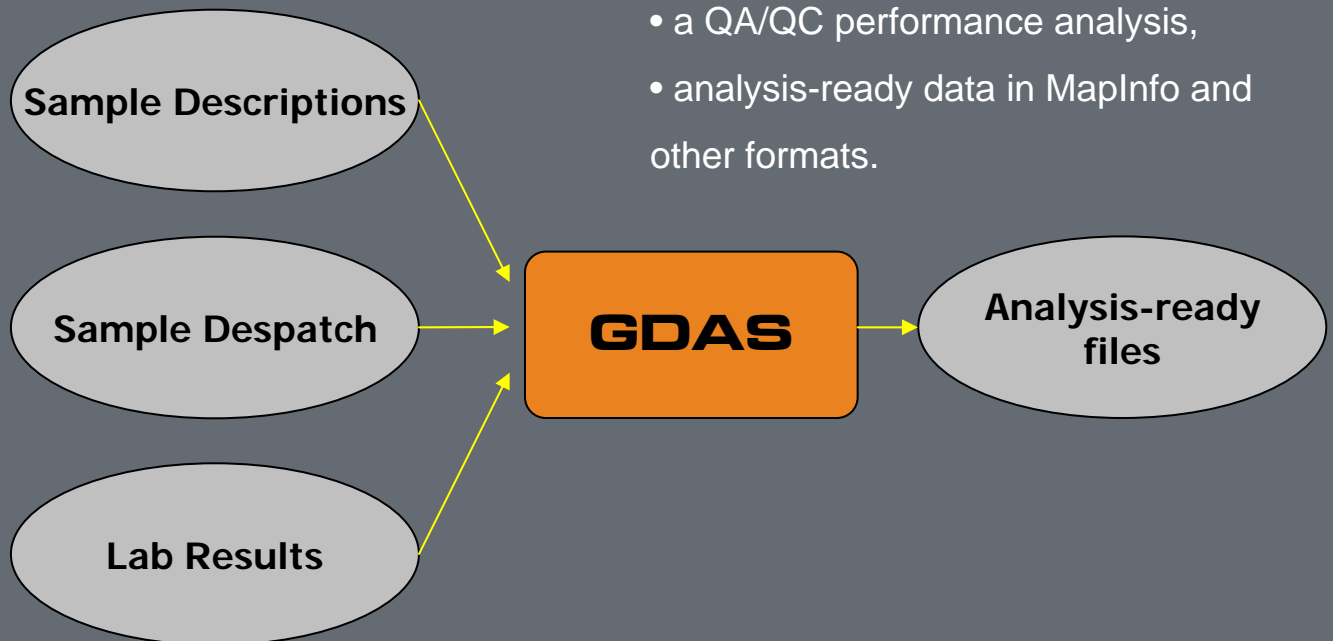

GDAS is a holistic approach to geochemical data management that is designed to **improve operating efficiency** and **data quality**. Global Ore Discovery has developed a range of components to create an integrated system that encompasses the full spectrum of geochemical data management from the field to the press release...

Global Ore Discovery can provide a customized range of data collection systems that may include:

- geological codes,
- validating Excel™ templates,
- PDA integration,
- sample despatch forms,
- sample booklets and more...

We use state-of-the-art relational databases to merge sample description files with sample despatch information and lab results. In the end, the client receives a succinct report with:

- sample tracking information,
- a QA/QC performance analysis,
- analysis-ready data in MapInfo and other formats.

GDAS is conducted under 12-month running contracts with a simple hourly charge basis with a **5 working-day turnaround guarantee**.
